

# Flip/Mirror Text in Adobe InDesign

mirror me!

*Shear X Angle*

1. Type text. Go to Window > Transform. Change the Shear X Angle to 10 degrees.

2. Click on the text with Selection Tool (Black Arrow). Hold the Alt (or Option) key down and select the toggle button in the Transform palette and choose Flip Vertical. If the key is not selected the copy does not occur.

3. Using the Direct Selection (white arrow), move the text underneath the other word. The Shear X Angle will automatically change to -10 degrees in the Transform palette. To change the opacity of the duplicated and flipped text, go to Window > Transparency. In this example, we used 25%.

This also works on objects....
